Tensoplast®

Elastic adhesive bandage

Tensoplast EAB is a natural unbleached, undyed elastic bandage. Its porous material allows the skin to breathe and is cool and comfortable to wear. Tensoplast EAB has distinctive yellow central line to support accurate overlap during application, suitable for use on soft tissue injuries such as sprains and strains, joint stabilisation, posture-improvement and also elasto-compressive treatment in phlebology. Not suitable for use on patients with a known intolerance to latex or colophony.

- Easy to unwind
- Soft non-fraying edges
- Remains securely in place with continuous reliable adhesion
- Individually boxed
- Contains dry and natural rubber latex

Tensoplast® LF

Elastic adhesive bandage

Tensoplast LF is a natural unbleached, undyed elastic bandage. Its porous material allows the skin to breathe and is cool and comfortable to wear. Tensoplast LF has distinctive yellow central line to support accurate overlap during application, suitable for use on soft tissue injuries such as sprains and strains, joint stabilisation, posture-improvement and also elasto-compressive treatment in phlebology.

- Easy to unwind
- Soft non-fraying edges
- Remains securely in place with continuous reliable adhesion
- Individually boxed
- Latex-free

Tensoplast®

Elastic adhesive plaster

Tensoplast EAP is a beige-coloured plain woven fabric designed for compressive strapping and taping of soft tissue injuries such as sprains and strains, joint stabilisation, posture-improvement and also elasto-compressive treatment in phlebology. Not suitable for use on patients with a known intolerance to latex or colophony.

- Lengthwise stretch allows the joints to move
- Easy to unwind
- Remains securely in place with continuous reliable adhesion
- Can be cut to length
- Contains dry and natural rubber latex

Lightplast® Pro

Tearable elastic adhesive bandage

Lightplast Pro is a lightweight, elastic, adhesive bandage available in black or white, ideal for compression and support of soft tissue injuries. It is also suitable for stabilising joints for injury prevention or stabilisation after cast removal, as well as posture improvement and elasto-compressive treatment in phlebology. Lightplast Pro is easy to unwind and hand-tearable, making it particularly suitable for immediate treatment of sports injuries. Not suitable for use on patients with a known intolerance to dry natural rubber latex.

- Conforms well to body contours
- Reliable adhesion
- Contains dry and natural rubber latex

Product code	Size	Colour	Sales unit

Tensoplast®

Elastic adhesive bandage

Tensoplast is an elastic adhesive bandage which provides strong compression and long-lasting support. It is made of 100% white cotton fabric, is water-repellent, easy to unwind and coated with a dry natural rubber adhesive for excellent initial and long-term adhesion. Tensoplast is ideal for compression strapping and taping of soft tissue injuries such as sprains and strains. It is also suitable for use in stabilising joints, both for injury prevention and after cast removal. It is not suitable for use on patients with a known intolerance to latex.

- Excellent initial and long-term adhesion
- Can be moulded to match body contours
- Suitable for dressing fixation
- Contains dry and natural rubber latex

Product code	Size	Sales unit
02114-00	2.5cm x 4.5m	1 x 36
02115-00	5cm x 4.5m	1 x 36
02117-00	7.5cm x 4.5m	1 x 36

Leukotape® K

Elastic kinesiology tape

Leukotape K is a stretchable tape suitable for use in kinesiology taping techniques, such as in the management of lymphoedema and muscular pain. The tape is applied using specific techniques, whereby tape is applied over and around muscles to give support, without affecting circulation or range of motion. In this way Leukotape K promotes the body's own healing process whilst allowing complete freedom of movement.

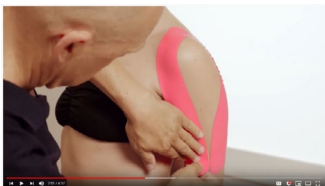

Leukotape K is constructed from a highly elastic cotton substrate coated with a wave pattern adhesive which works with the skin's natural elasticity and generates the therapeutic effect. The fabric is elastic, water-repellent, offers reliable adhesion and is durable for up to nine days use.

- Protective backing paper for control of extension and ease of handling
- Quick and easy to apply and to cut, leaving no residue on the scissors
- No fraying edges after cutting or at stretch
- Breathable fabric, permeable to air and water vapour
- Residue-free removal
- Latex-free formulation
- Skin friendly

Leukotape® Classic

Non-elastic adhesive strapping tape

Leukotape Classic is a rigid strapping tape designed to provide strong support and effective stabilisation to sports injuries such as sprains and strains, and is suitable for use in stabilising and protecting weak joints or ligaments. Made of 100% cotton fabric, with a zinc oxide adhesive, Leukotape Classic offers reliable adhesion.

It contains dry natural rubber latex so not suitable for use on patients with a known intolerance to latex or colophony.

- High tensile strength, providing rigid support
- Easy unwinding
- Tearable in both length and crosswise direction
- Water-repellent backing material

Product code	Size	Sales unit	PIP code
01700-00	2cm x 10m	1 x 5	359-1336

01703-00	5cm x 10m	1 x 5	359-1351

Leukotape® P

Strong adhesive rigid strapping tape

Leukotape P is a strong, rigid strapping tape with a zinc oxide adhesive. It is designed for functional taping as treatment and prevention of injuries to muscles, ligaments and joints. Leukotape P unwinds easily, has serrated edges to prevent fraying and allows free air circulation to the skin. It contains dry natural rubber latex so not suitable for use on patients with a known intolerance to latex or colophony.

Also available in a combi pack which contains a roll of Leukotape P along with a roll of Fixomull® and includes full instructions for application of the McConnell patellofemoral taping technique.

Strappal®

Hypoallergenic rigid strapping tape

Strappal provides strong support and efficient stabilisation of joint structures. It is constructed from a hand-tearable, viscose fabric combined with a zinc oxide adhesive. The hypoallergenic adhesive minimises the risk of reaction for the patient.

- Allows radiological examination without removal
- Serrated edges to prevent fraying
- Consistent unwinding tension
- Latex-free formula

Co-Plus®

Flexible cohesive bandage

Co-Plus is a flexible cohesive bandage designed to provide short term compression for soft tissue injuries. It can also be used in conjunction with other products such as fixation of wound dressings and in the treatment of venous leg ulcers as part of a multi-layer bandage system, layer #4. Co-Plus maintains its original size and does not shrink over time, providing consistent support and compression. It's air-permeable materials allow the skin to breathe and reduce the potential for skin maceration. Not suitable for use on patients with a known intolerance to dry natural rubber latex.

- Adheres only to itself, not to dressing or clothes
- Secure, non- slip, retains cohesiveness in use
- Contains dry and natural rubber latex

Tensoplus®

Cohesive retention bandage

Tensoplus is an elastic cohesive bandage is used for the compression and support of muscles and joints for medical and sports purposes, as well as in the treatment of oedema and for phlebology. It is also suitable for the use in the fixation of wound dressings as well as devices such as splints, tubes and paddings. Its natural rubber latex covering means that the bandage sticks to itself by simple pressure. Tensoplus is a reusable bandage which can be washed up to 5 times. Not suitable for use on patients with a known intolerance to dry natural rubber latex.

- Adheres on itself and not on the skin
- Stretchable backing and woven to prevent fraying
- Repositionable
- Hand-tearable

Soffcrepe®

Type 2 crepe bandage

Soffcrepe is a woven, non-sterile, non-adhesive elastic crepe bandage. It is designed to provide light compression in oedema management and light support in the treatment of minor soft tissue and joint injuries such as sprains and strains. Soffcrepe can also be used to secure dressings as well as fixation of casts or splints.

- Air-permeable
- Finished woven edges, non-fraying
- Anti-slip behaviour, inter-layer adhesion helps to keep the bandage in place
- Latex-free formula

Elastocrepe®

Cotton crepe bandage

Elastocrepe is a beige coloured woven cotton crepe bandage made from cotton and viscose. It provides light support in the treatment of sprains and strains and light compression for oedema management. It is suitable for securing dressings as well as fixation of casts or splints.

- Air-permeable
- Central yellow line for accurate overlap
- Soft non-fraying edges
- Includes clip

Tensogrip®

Elasticated tubular support bandage

Tensogrip is made from circular-knitted, seamless elastic fabric. It provides light support for the treatment of minor soft tissue and joint injuries and light compression for the reduction of swelling. Tensogrip is also suitable to secure wound dressings as well as protecting the skin from casting material when used as an undercast bandage. Contains natural rubber latex, do not use on patients with a known latex allergy.

- Air-permeable
- Easily cut to size

Physiopack®

Reusable hot / cold pack

Actimove® Physiopack® is a re-usable gel pack providing both hot and cold therapy.
Cooling treatment - for acute soft tissue injuries, inflammation and chronic diseases such as osteoarthritis and rheumatoid arthritis.
Heat treatment - for treatment of muscle pains, subacute inflammations such as arthritis and soft tissue stiffness.

Supplied with a fleece pouch which holds the pack in place thanks to the elastic strap and hook and loop fixing.
Easy to cool in a freezer or fridge to allow for immediate cold treatment.
Heat up in a microwave or in hot, but not boiling water.

Do not apply Actimove® Physiopack® with:
Cold Therapy - Impaired circulation, Raynaud’s disease, Cryoglobulinemia, Paroxysmal cold haemoglobinuria, cold urticaria
Hot Therapy - Impaired circulation, Neoplasm, sensory problems, acute trauma, bleeding, acute inflammation, acute oedema
